### **EXAMINER'S AMENDMENT**

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview by Mr. MONTONE, GREGORY on August 3, 2004.

The application has been amended as follows:

#### **Claim**

Claim 9 has been cancelled.

***Allowable Subject Matter***

Claims 1-8 and 10-12 are allowed.

The following is an examiner's statement of reasons for allowance:

Claims 1-8 and 10-12 are allowable because there is no prior art of record that either teaches or suggests a display device comprising the specific limitation recited in the following claims:

Claim 1:

- a conductive film is disposed between the substrate and the semiconductor film under the data line.

Claim 7:

- a conductive film is disposed between said substrate and the first insulating film in such a manner as to cover spacing between the pixel electrode and the data line adjacent thereto, and wherein the semiconductor film is interposed between the first insulating film and a portion of the data line overlying the conductive film for increasing spacing between the data line and the conductive film to reduce electro-static coupling between the data line and the conductive film.

***Conclusion***

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Sasaki et al. (US 5084905) disclose a thin film transistor panel having transparent pixel electrodes 41 is connected to source electrodes 36 of thin film transistors T3 by means of metal-diffused layers 38a on inner surfaces of contact holes 39.

Waikai et al. (US 5055899) disclose a thin film transistor (TFT) having pixel electrode formed a passivation film and connected to an electrode of a TFT.

Kawanhata et al. (US 5,726,077) disclose a method of producing electro-optical device pixel electrodes formed an insulation film and connected to electrodes of TFTs.
